Respiration and ATP

Teacher / technician

YEAR 10 / LESSON 20 / BIOLOGY + SCIENCE (DOUBLE AWARD)

Staff preparation and answer guidance. Keep separate from student sheets. Original learning tasks; no supplied numerical example represents class measurements.

Coverage and delivery

Shared Biology / Double Award: 2.34–2.35. ATP and cellular energy transfer.

Allow about 60 minutes. Follow the student sequence and use the answers to check reasoning.

Requisition • class of 30, working in 15 pairs

Item	Per pair / setup	Class total
Student booklets	1 per learner	30
Paper model sets / rulers	1 per pair	15 of each

Immediate safety

Paper, modelling and written reasoning only. No chemicals or biological samples are handled.

Preparation and delivery

Read alongside the student method

YEAR 10 / LESSON 20 / BIOLOGY + SCIENCE (DOUBLE AWARD)

1. Provide 30 booklets and 15 sets of paper or reusable modelling materials.

2. Keep answers separate until learners have attempted the tasks; discuss the reasons for corrections.

Close of lesson

• Return models and keep the corrected work.

Check before teaching

Check the cards, reference data and quantities against this requisition. Keep the staff answer guide separate until the checking stage. Supplied numerical practice datasets are labelled examples; they are not class measurements.

Answers and teaching notes

Expected explanations • do not give as experimental observations

YEAR 10 / LESSON 20 / BIOLOGY + SCIENCE (DOUBLE AWARD)

• Adenosine triphosphate.

• Respiration.

• Active transport, muscle contraction or synthesis of larger molecules.

• Yes. Plant cells need ATP for processes including synthesis and transport, whether or not photosynthesis is occurring.

• Breathing moves air; respiration involves cellular chemical reactions transferring energy.

• ATP is a molecule involved in coupled chemical reactions; it is not a literal container of energy or a token that travels unchanged forever.
