Net gas exchange in a leaf

Teacher / technician

YEAR 10 / LESSON 33 / BIOLOGY ONLY

Staff preparation and answer guidance. Keep separate from student sheets. Original learning tasks; no supplied numerical example represents class measurements.

Coverage and delivery

Biology only: 2.40B–2.41B and 2.44B. Diffusion, photosynthesis and respiration.

Allow about 60 minutes. Follow the student sequence and use the answers to check reasoning.

Requisition • class of 30, working in 15 pairs

Item	Per pair / setup	Class total
Student booklets	1 per learner	30
Paper model sets / rulers	1 per pair	15 of each

Immediate safety

Paper, modelling and written reasoning only. No chemicals or biological samples are handled.

Preparation and delivery

Read alongside the student method

YEAR 10 / LESSON 33 / BIOLOGY ONLY

1. Provide 30 booklets and 15 sets of paper or reusable modelling materials.

2. Keep answers separate until learners have attempted the tasks; discuss the reasons for corrections.

Close of lesson

• Return models and keep the corrected work.

Check before teaching

Check the cards, reference data and quantities against this requisition. Keep the staff answer guide separate until the checking stage. Supplied numerical practice datasets are labelled examples; they are not class measurements.

Answers and teaching notes

Expected explanations • do not give as experimental observations

YEAR 10 / LESSON 33 / BIOLOGY ONLY

- No.
- −2, 0 and +5 units min^{-1}, using outward oxygen as positive.
- Opposing processes balance while both continue.
- Photosynthesis can consume carbon dioxide faster than respiration supplies it, maintaining an inward gradient.
- Photosynthesis ceases without light while respiration continues, giving net carbon dioxide release and oxygen uptake.
- It responds to the combined balance of photosynthesis, respiration and exchange with its environment.
