Pathogens and virus models

Teacher / technician

YEAR 10 / LESSON 5 / BIOLOGY + SCIENCE (DOUBLE AWARD)

Staff preparation and answer guidance. Keep separate from student sheets. Paper and model activity. No live culture, specimen collection or clinical interpretation.

Coverage and delivery

Shared Biology / Double Award: 1.4. Pathogen groups and viruses.

Allow about 60 minutes. Follow the student sequence and use the answers to check reasoning.

Requisition • class of 30, working in 15 pairs

Item	Per pair / setup	Class total
Student booklets	1 per learner	30 copies
Paper / model sets	1 per pair	15 sets
Writing tools / rulers	1 per learner	30 sets

Immediate safety

Use paper or clean reusable models. No body samples, microbial cultures or unknown biological material are handled.

Preparation and delivery

Read alongside the student method

YEAR 10 / LESSON 5 / BIOLOGY + SCIENCE (DOUBLE AWARD)

1. Provide 30 student booklets and 15 sets of reusable models or blank paper cards. All examples needed are supplied in the task text.

2. Allow 10 minutes recall, 25 minutes pair reasoning, 15 minutes explanation and 10 minutes corrections. Keep answers separate until discussion.

3. Keep discussion respectful and factual; do not ask pupils to disclose health status.

4. Do not describe antibiotics as treatments for viruses or infer disease from appearance. This lesson gives no individual medical advice.

Close of lesson

• Return reusable materials and retain your corrected reasoning.

Check before teaching

Check the cards, reference data and quantities against this requisition. Keep the staff answer guide separate until the checking stage. Supplied numerical practice datasets are labelled examples; they are not class measurements.

Answers and teaching notes

Expected explanations • do not give as experimental observations

YEAR 10 / LESSON 5 / BIOLOGY + SCIENCE (DOUBLE AWARD)

- A biological agent that causes disease.
- Bacteria, fungi, protoctists and viruses.
- Genetic material, DNA or RNA, and a protein coat.
- They depend on host-cell machinery and resources to make new virus particles.
- HIV is the virus; AIDS is a syndrome that can develop after severe immune damage.
- Plasmodium is the pathogen; the mosquito transmits it as a vector.
