Biopolyesters: test the biodegradability claim

Teacher / technician

YEAR 11 / LESSON 108 / CHEMISTRY ONLY

Staff preparation and answer guidance. Keep separate from student sheets. Written and model-based lesson; no laboratory procedure is implied.

Coverage and delivery

Chemistry only: 4.50C, supported by recall of polymer disposal in 4.47.

Allow about 60 minutes. Follow the student sequence and use the answers to check reasoning.

Requisition • class of 30, working in 15 pairs

Item	Per pair / setup	Class total
Booklet / writing tools	1 per learner	30 sets
Model kit / periodic table	1 set per pair	15 sets

Immediate safety

Desk activity only; keep small model pieces away from mouths.

Preparation and delivery

Read alongside the student method

YEAR 11 / LESSON 108 / CHEMISTRY ONLY

1. Provide 30 booklets and 15 model kits or reusable atom counters; no chemicals are needed.

2. Use 10 minutes retrieval, 25 independent/pair tasks, 15 explanation and 10 corrections. Keep first attempts visible.

3. Keep this Chemistry-only extension while using shared polymer-disposal recall.

4. No heated plastic, uncontrolled compost culture or unsupported local disposal claim is included.

5. Check all carbon valencies, formula subscripts and equation coefficients. Label any supplied numbers as practice data, not class observations.

Close of lesson

- Return shared equipment and retain corrected reasoning.

Check before teaching

Check the cards, reference data and quantities against this requisition. Keep the staff answer guide separate until the checking stage. Supplied numerical practice datasets are labelled examples; they are not class measurements.

Answers and teaching notes

Expected explanations • do not give as experimental observations

YEAR 11 / LESSON 108 / CHEMISTRY ONLY

- The ester linkage in its backbone.
- No; structure and environmental conditions matter.
- No; feedstock origin and breakdown behaviour are separate properties.
- Reaction/microbial rates and available organisms depend on conditions; results cannot be transferred automatically.
- No; fragmentation may leave microplastics rather than establish biological conversion.
- The accepted collection/treatment route, required conditions and evidence/standard supporting the claim.
