Alkanes: saturated structures and patterns

Teacher / technician

YEAR 11 / LESSON 77 / CHEMISTRY + SCIENCE (DOUBLE AWARD)

Staff preparation and answer guidance. Keep separate from student sheets. Written and model-based lesson; no laboratory procedure is implied.

Coverage and delivery

Shared core: 4.19–4.21. Unbranched alkanes through pentane; saturation and general formula.

Allow about 60 minutes. Follow the student sequence and use the answers to check reasoning.

Requisition • class of 30, working in 15 pairs

Item	Per pair / setup	Class total
Booklet / writing tools	1 per learner	30 sets
Model kit / periodic table	1 set per pair	15 sets

Immediate safety

Desk activity only; keep small model pieces away from mouths.

Preparation and delivery

Read alongside the student method

YEAR 11 / LESSON 77 / CHEMISTRY + SCIENCE (DOUBLE AWARD)

1. Provide 30 booklets and 15 model kits or reusable atom counters; no chemicals are needed.

2. Use 10 minutes retrieval, 25 independent/pair tasks, 15 explanation and 10 corrections. Keep first attempts visible.

3. Issue at least five carbon and twelve hydrogen model pieces per pair.

4. Do not say each carbon bonds to four hydrogen atoms; internal carbons also bond to carbon neighbours.

5. Check all carbon valencies, formula subscripts and equation coefficients. Label any supplied numbers as practice data, not class observations.

Close of lesson

- Return shared equipment and retain corrected reasoning.

Check before teaching

Check the cards, reference data and quantities against this requisition. Keep the staff answer guide separate until the checking stage. Supplied numerical practice datasets are labelled examples; they are not class measurements.

Answers and teaching notes

Expected explanations • do not give as experimental observations

YEAR 11 / LESSON 77 / CHEMISTRY + SCIENCE (DOUBLE AWARD)

- CH_4, C_3H_8 and C_5H_{12}.
- Three-carbon chain, eight separate C–H bonds and two C–C bonds; each carbon has four total bonds.
- Only single carbon–carbon bonds; no carbon–carbon multiple bonds.
- Extending the chain adds CH_2 overall while retaining two terminal ends.
- The connectivity and molecular formula remain unchanged.
- No; saturation of hydrocarbons concerns bonding, whereas saturated solution describes a solubility limit at given conditions.
